## **New LoadLifter 5000 Kit Released for Toyota Tundra**

**Contact: Mike Morgan, (800) 248-0892, ext. 265, [mikemorgan@airliftcompany.com](mailto:mikemorgan@airliftcompany.com)**

**LANSING, MI • July 12, 2007** — Air Lift Company announced today the release of a new LoadLifter 5000 air spring suspension kit for the 2007 Toyota Tundra, two- and four-wheel-drive models. This kit is one of Air Lift's many no-drill applications featuring a bolt-on assembly easily installed between the vehicle's frame and factory leaf springs. The single bellow design provides brute strength capable of handling big loads with full-time load support up to 3,000 pounds, improving safety and ride quality.

LoadLifter 5000 is Air Lift's toughest line of adjustable air helper springs. They are built like a tire with reinforced 2-ply fabric rubber bellows and ultra high strength Zytel® nylon end caps. The kits come standard with a two-year, no mileage restriction, limited warranty. For the ultimate in air suspension performance, add an on board air compressor system and upgrade your air springs to a limited lifetime warranty.

This new LoadLifter 5000 air spring suspension kit—part No. 57299—is available for immediate purchase.

Air Lift Company is the premier global supplier and manufacturer of aftermarket air suspension products. For more information, contact Air Lift Company by calling (800) 248-0892, or on the Web at <http://www.airliftcompany.com/>.
